Please note

This document provides information about the model range line-up and specifications of the Vito. It also contains key details about options, economy and performance of all variants. Details are correct at time of publication and are subject to revision. Any images used in this document may not reflect Irish specification and are for illustrative purposes only.

Vito Design

The image shows the front interior of a Mercedes-Benz Vito. The dashboard is black with a large central infotainment screen displaying a navigation map. Below the screen is a climate control panel with physical buttons and a digital display. The steering wheel is black with the Mercedes-Benz logo in the center. The passenger seat is visible on the left, featuring a black and white checkered pattern. The background shows a wooden wall and a window. The text "Vito" is written in a small, white, sans-serif font, and "Technology" is written in a large, white, serif font, both positioned in the upper right area of the image.

Vito Technology

Mercedes-Benz User Experience (MBUX)

Transforming the in-car user experience, thanks to MBUX: Controlled via voice or touch input, the innovative infotainment system can over time even predict personal habits thanks to artificial intelligence.

Voice control

- Activated by the keywords “Hey Mercedes”, the new intelligent voice control LINGUATRONIC¹ lets you control many of the infotainment functions, including destination input, phone calls or music selection
- MBUX even understands indirect commands. Feeling chilly? Just say “I feel cold” and MBUX will adjust the temperature for you
- MBUX is able to understand different accents and will adjust to you over time

Personalisation

- Turn the new Vito into your very own Mercedes-Benz by personalising driving modes, radio stations, ambient lighting and much more
- Your personal settings can be saved in different profiles, making your driving experience the best one possible
- Thanks to artificial intelligence, MBUX is able to learn and adapt over time. It will be able to predict your personal habits, such as navigation for frequently-driven routes, or the radio station you like to listen to on your way home from work

Touch inputs

- Beside voice control you can operate MBUX via touchscreen, the touchpad on the centre console, as well as touchcontrol buttons on the steering wheel
- The touchpad recognises your handwriting should you wish to enter addresses or phone numbers silently

Maintenance and service

- Wondering when the next service is due? Or how much further you can drive until you need to stop at a petrol station? Just ask your MBUX – it will tell you the answer

The connection of the communication module to the mobile phone network including the emergency call system depends on the respective network coverage and availability of network providers ¹LINGUATRONIC off-board functions are currently only available for three years

Driving Assistance package ¹

The Driving Assistance package¹ contains a range of highly intelligent features to help you stay safe on the road – by making the drive more effortless, by warning of danger, and by taking steps to protect you in an emergency.

Active Distance Assist DISTRONIC² helps maintain the desired distance from the vehicle in front

Active Emergency Stop Assist²: immediate emergency braking if evasion is impossible

Active Speed Limit Assist ensures detected speed limits are automatically adopted as the set speed for Active Distance Assist DISTRONIC

Active Steering Assist: targeted steering intervention to prevent unintentional drifting out of lane

Emergency corridor function

Extended automatic restart on motorways

Route-based speed adaptation

¹Our driver assistance and safety systems are aids and do not relieve you of your responsibility as the driver. Please take note of the information in the Owner's Manual and the system limits which are described therein ²This safety and assistance system feature is also standard on Avantgarde line.

Vito

Model lines overview
